Wizard-OR 2.0 Surgical Instrument Recovery Device - Metal Detector for Prevention of Surgical Tools in Operating Rooms and Other Situations Where Instruments Can Be Lost.

New advanced circuitry provides superior detection along with greater control of detection sensitivity and scalable volume control.

Sterile Drape Hamper Surgical Instrument Metal Detector

Patented Surgical Instrument Metal Detector Detects Instruments - Utensils Before Being Discarded.

Also used for an array of medical industry, commercial, laboratory and scientific uses. The Wizard Instrument Detector is a precision 360 degree loop metal detector constructed of heavy duty, injection molded polycarbonate. Unique design fits onto optional commercial hamper stands or sits free standing on optional legs.

The Wizard Instrument and Utensil Detector instantly alerts user that a metallic object has passed through its opening allowing for immediate retrieval or reporting. Used for loss prevention in operating rooms, laboratories and other environments. The Wizard Instrument Detector incorporates a Digital Counter that increments by one each time there is a detection occurrence.

The Wizard Instrument Detector operates in either AC or DC mode by way of a self contained, rechargeable Ni-MH battery pack.

*Hamper Stand Not Included
